

SEDIMENT CONTROL for Rail Maintenance Pits

Purpose-built sediment filtration pad for the base of maintenance pits. Engineered to sit directly over channel drains, it captures and retains sediment before it reaches your drainage infrastructure with zero tools, and zero disruption to your maintenance workflow.

KEY FEATURES

Sediment Filtration

100 microns

Rapid Installation

Under 2 minutes, no specialist equipment

UV Stable & Temperature Stable

From -20°C to +50°C

High Flow Rate

3,600 L/min per pad, can handle simultaneous pressure washers

Modular

Hook-and-loop attachment for full-pit coverage

Chemically Resistant

Resistant to common depot fluids (AdBlue, coolants and antifreeze)

Easy Clean & Maintain

Surface brush or pressure-washed

Safety-Designed

High-visibility yellow webbing

Works With...

Existing channel slot drain infrastructure
